

THREE QUICK STEPS TO NEXTLIGHT™

It's easy to set up a NextLight connection to your property, but there are a few things we need first.

1. A right of entry agreement for certain areas. This lets us access your property to build and hook up service.

2. A walk-through of the property with you, so we can learn where your existing phone and Internet wiring is and where any communication closets may be. This includes visiting a couple of units so that we can determine the most ideal design and the best place to attach the home's ONT, our "fiber modem."

3. Whenever you're ready, invite us back so we can give a presentation to your tenants on the new service available to them.

Just call us at 303.651.8386 and ask to speak to one of our MDU specialists. Together, we'll help you offer the best Internet in Longmont, at a price no one can beat.
